

The University of Texas at Dallas

Explore AI for biomaterials research

Join CyberTraining Workshops in AI, scientific computing, and biomaterials design. Funded through the NSF Cybertraining program, OAC 2612287.

For undergraduate and graduate students

Bioengineering, computer science, materials science, chemistry, and related fields. Students from UT Dallas and other institutions are welcome to express interest.

CyberTraining Workshops

Guided coding

Practice scientific computing and AI methods

Biomaterials data

Work with real datasets and research questions

Team mini-projects

Connect computational methods with experiments

Explore research questions that matter

Drug and gene delivery / Polymer and materials design
Tissue engineering / Reliable AI for scientific discovery

**The workshop will be held every two weeks.
Each participant will receive a \$200 stipend.**

Application opens
