

The University of Texas at Dallas

STUDENTS WILL RECEIVE COMPENSATION

Explore AI for biomaterials research

Connect machine learning, scientific computing, and biomaterials through practical training and collaborative projects.

For undergraduate and graduate students

Bioengineering, computer science, materials science, chemistry, and related fields. Students from UT Dallas and other institutions are welcome to express interest.

Student collaboration illustration

Three ways to learn and connect

Workshops

Guided coding and hands-on mini-projects

Summer bootcamp

An online introduction to AI-enabled biomaterials

Invited talks

Research perspectives across AI and biomaterials

Explore research questions that matter

Drug and gene delivery / Polymer and materials design
Tissue engineering / Reliable AI for scientific discovery
